

Star Series Wiring

Wolf Star, Dragon Star, Dark Star

Wiring for Star Series pickup using two toggles or push pull switches (on-on)

The switch outputs are from the middle terminals.

In the up position, the top terminals will be connected to the middle terminals.

In the down position, the bottom terminals will be connected to the middle terminals.

One switch is used to select both pickups between full live (red) giving unbalanced coils and tapped live (white) giving balanced coils. Each pickup should have both of its' connections on the same side of the switch.

The second switch is used to select both pickups between full earth (green) and tapped earth (black). Each pickup should have both of its' connections on the same side of the switch.

The Cyan switch outputs are connected to earth.

The Magenta switch outputs are connected to live (either pickup selector switch or independent vol/tone pots)
